

Waste Monitoring & Management

Iqra University is committed to sustainable waste management and ensures that nearly 79% of inorganic waste generated across its campuses is recycled, with the remaining portion responsibly sent to landfill. This high recycling rate reflects the university's dedication to minimizing its environmental impact by responsibly managing resources and reducing waste.

The university's inorganic waste, comprising items such as iron, plastic, obsolete equipment, furniture, fixtures, cables, and electronic equipment, is collected and tracked systematically. The waste is processed and sold through a competitive bidding process involving third-party recycling businesses, ensuring that most materials are recycled back into useful products, thereby aligning with the university's environmental goals. Monthly Scrap Re-Sale Receipts managed by the Procurement Department (samples attached below) provide consistent monitoring and documentation of this waste management process.

Trash Bins for Recycling

MoU with TRE Cycle for Inorganic Waste Treatment

Recycling Contribution and Community Impact

The funds generated from this recycling process are allocated to support community service initiatives and student societies focused on environmental activities. This not only reinforces the university's commitment to sustainability but also fosters a culture of environmental responsibility within the student body.

Zero Plastic & Paper Policy

In addition to recycling efforts, Iqra University enforces a "No Plastic & Paper" policy campus wide. This policy mandates that all university operations, third-party contractors, and events remain free from single-use plastic and paper consumption. This initiative has significantly reduced plastic waste on campus, directly enhancing organic waste management.

Through these actions, Iqra University not only contributes to global sustainability goals but also serves as a leader in environmentally responsible practices within the higher education sector.
