

## **Inorganic Waste Monitoring & Management**

The university actively collects inorganic waste generated on its premises, including items like iron, plastic, obsolete equipment, furniture, fixtures, and cables & electronics equipments. This waste is then responsibly disposed of through a competitive bidding process, involving third-party recycling businesses, contributing to sustainable waste management practices (quotation attached below). Similarly, the waste is monitored through a monthly Scrap Re-Sale Receipts managed by the Procurement Department of the University (sample attached below).

*With this process we recycled atleast 60%- 80% of the waste based on the nature of inorganic waste.*

The funds generated are used for community service and students society working towards environment.

As well as, we have a university wide **“No Plastic”** Policy henceforth all the university operations, third party contractors and even all our events have zero plastic consumption, which has significantly reduce the plastic waste at campus directly contributing to increase organic waste management at campuses.
